

Welcome to Empower Sleep.

The relationship between sleep and longevity is well-documented. Both short and long sleep duration are independently linked to lower lifespan.

Yet, sleep remains the most neglected variable in longevity.

We built Empower Sleep to change that. To give people access to the same depth of analysis for their sleep that they expect for every other system in their body—measured continuously, interpreted by real experts, and acted on longitudinally.

This is sleep medicine *built for people who take their health seriously.*

— Sahil Chopra, MD
Chief Medical Officer, Empower Sleep

SLEEP & HEALTH OUTCOMES

Sleep duration and all-cause mortality risk

Adapted from meta-analyses of prospective cohort studies on sleep duration and all-cause mortality

The most personalized care for sleep and circadian health

Empower Sleep combines medical-grade sleep testing, multi-algorithm analysis, and a dedicated care team that guides you with personalized protocols.

All from the comfort of your home.

MEET YOUR TEAM

Real experts. Real sleep science

Every patient is supported by a dedicated, multidisciplinary care team. Our sleep physicians, sleep coaches, and care coordinators work together and stay with you throughout your program.

Our care is rooted in guiding principals

01

A sleep study is not a “sleep apnea study”

Sleep is more than breathing. We evaluate sleep architecture, fragmentation, stability, oxygenation, heart rate variability, and circadian health. We need to understand it comprehensively.

04

Sleep without circadian biology is incomplete

What you do during the day matters as much as how you sleep. We assess your circadian rhythm and build it into every recommendation, from light exposure to meal timing and more.

02

Sleep is a longitudinal, active process

A single-night sleep test is a snapshot. Longitudinal sleep testing paints a story. We test over weeks to capture the variability, patterns, and trends that actually define your sleep. That’s how we drive the best outcomes.

05

The care team moves together

Your physician, sleep coach, and psychologist work as one team — sharing notes, adjusting together, and learning from global experts in sleep medicine.

03

Treat the member, not the guidelines

Most of sleep medicine runs on simple algorithms. Sleep apnea equals a CPAP. Insomnia equals a sedative or CBT-I. Guidelines are often built on population health averages. We don't practice that way.

Every member at Empower Sleep is treated as an N-of-1.

06

Follow the physiology, not the diagnosis

We let the data tell us what’s happening and treat accordingly. We take a physiology-first approach. This means we leverage the best technologies, algorithms, and tools to come to conclusions that make the most sense, scientifically.

We were inspired by what CGMs did for diabetes care.

So we did the same for sleep care.

At Empower Sleep, we watch sleep patterns unfold overtime using continuous home sleep testing. We ship you a medical-grade sleep testing device, which captures data every night. We analyze the data through multiple algorithms. Your care team interprets the results and what the data means in the context of your life.

Then, we act on it.

PROGRAMS

Three programs. One care team. Built around *you*.

We have unique programs catered to where you are in your health journey.

Every program starts with the same foundation: longitudinal sleep testing, a dedicated care team, and a clinical depth that no other sleep clinic offers.

Some people want to understand what's happening. Others are ready to fix their sleep. And some want a team that stays with them for the long run.

01

Foundation

The most comprehensive **sleep and circadian health assessment**

02

Optimization

Comprehensive assessment plus **end-to-end care**

03

Longevity

Assessment, optimization, and **maintenance for the full year**

FOUNDATION

The most comprehensive assessment for your sleep

The diagnostic foundation. Up to 30 nights of medical-grade sleep testing and in-depth conversations with experts.

\$1,200

1 month

- Up to 30 nights of sleep testing
- Multi-algorithm sleep testing validation
- Wearable data integration
- 60-minute sleep coaching consultation
- 60-minute sleep physician or Nurse Practitioner consultation
- Personalized care roadmap
- Unlimited in-app messaging

** We strive to be transparent with pricing. Superbill can be available upon request. Reimbursement will vary depending on your individual insurance plan*

Member Journey

Day 1

Sign Up & Start Testing

We will ship you a home sleep testing device after you sign up

Week 1

Sleep Coach Deep Dive

Meet your sleep coach virtually to discuss your health history in depth

Between Weeks 1-3

Sleep Testing & Insights

Capture at least 15 nights of sleep data with in-app insights

Between Week 3-4

Comprehensive Results & Roadmap

Our medical team gives you a comprehensive overview of your results with a roadmap to get your sleep back on track

OPTIMIZATION

Fix your sleep in 4 months with end-to-end care

Everything in Sleep Foundation, plus four months of active care and treatment. Diagnosis, implementation, and real-time adjustments with a dedicated care team.

\$3,000 • \$4,000 without insurance
4 months

- Everything in Sleep Foundation
- 4 months of continuous sleep testing + care
- Ongoing consults with sleep coaches and physician
- Guidance for treatment implementation**
- Insomnia coaching
- CPAP therapy and coaching
- Oral appliance guidance
- Alternative therapy guidance
- Unlimited texting & care coordination

* Physician and NP consultations can be billed to insurance. Co-pays and deductibles applied
** Does not include cost of treatment (e.g. CPAP, oral appliance, etc.)

Member Journey

LONGEVITY

Perform at your best, year-round

Year-round sleep management for patients who want healthy sleep as a priority. Ideal if you travel frequently, take therapies that shift your physiology, or simply see sleep as a critical component of your health.

\$6,000 • \$8,000 without insurance*
12 months

- Everything in Optimization
- 12 months of complete care
- Year-around physician consultations
- Long-term maintenance and adjustment plan
- Discounts on more advanced sleep tests and labs

** Consultations can be billed to insurance. Co-pays and deductibles applied for physician and NP consultations*

Member Journey

Day 1

Sign Up & Start Testing

We will ship you a home sleep testing device after you sign up

Week 1

Sleep Coach Deep Dive

Meet your sleep coach virtually to discuss your health history in depth

Between
Weeks 1-3

Sleep Testing & Insights

Capture at least 15 nights of sleep data with in-app insights

Between
Week 3-4

Comprehensive Results & Roadmap

Our medical team gives you a comprehensive overview of your results with a roadmap to get your sleep back on track

Between
Week 4-16

End-to-End Care With Personalized Therapies

Start and optimize your sleep based on your care team recommendations. This includes medical devices, insomnia coaching, pharmaceuticals, and more

Beyond
Week 16

Maintenance & Resilience

Maintain healthy sleep with unlimited sleep testing, regular check-ins, and unlimited messaging with your care team

WHAT WE MEASURE

Integrating biomarkers for one complete picture

SLEEP STAGES

Stable sleep, unstable sleep, REM, and wake—mapped across the full night

SLEEP QUALITY INDEX (SQI)

A composite score reflecting overall state of your autonomic nervous system

APNEA-HYPOPNEA INDEX (AHI)

Breathing interruptions per hour. A critical and primary marker for sleep apnea

MEDICAL HISTORY

Deep understanding of your medications, comorbidities, and health history

OXYGEN DESATURATION INDEX

How often blood oxygen drops during sleep — a measure of respiratory stress

RESPIRATORY DISTURBANCE INDEX

A broader measure capturing subtler breathing disruptions beyond standard apnea

SLEEP FRAGMENTATION

How often sleep is interrupted, even when you don't fully wake

CONSUMER WEARABLES

Integrate your Apple Watch, Eight Sleep, Garmin, Oura, and Whoop for in-depth review

CYCLIC VARIATION IN HEART RATE

Subtle heart rate patterns linked to airway obstruction, even when AHI appears normal

BLOOD OXYGEN (SPO2)

Continuous overnight oxygen levels. A window into cardiovascular and respiratory health

HEART RATE

Resting heart rate and overnight trends reflecting autonomic function

CPAP DEVICE DATA

Understand not only your breathing, but also how your sleep changes with specific therapies

CIRCADIAN RHYTHM ALIGNMENT

Assessment of whether your internal clock matches your sleep schedule

NIGHT-TO-NIGHT VARIABILITY

The degree of change between nights. High variability often signals an underlying disorder

SLEEP EFFICIENCY & REGULARITY

Time in bed vs. time sleeping, plus how stable your sleep timing is across the testing window

DAILY BEHAVIORS

In-app journal that captures daily behaviors to better contextualize the data

This is what happens when you actually treat sleep with data, over time.

The blue line is an Empower Sleep patient, testing continuously, adjusting in real time, improving week by week with guidance from their care team.

The gray dots are what a traditional sleep lab sees: a single snapshot at the beginning, and sometimes one follow-up months later.

I learned things about my sleep that I wish I had known a decade ago. I've been making improvements ever since my initial assessment and the team checks in regularly to see how I'm doing.

Empower Sleep needs to be the model for the entire health care system. This is how it should be.
