

Virtual care and treatment, for any sleep disorder

World class specialists, in-home sleep testing, and personalized sleep care. All from the comfort of your home.

“If sleep does not serve an absolutely vital function, then it is the biggest mistake the evolutionary process has ever made”

-Allan Rechtschaffen PhD.

Metabolic Health - Glucose homeostasis, insulin sensitivity and satiety regulation

A physiologic balance of REM / NREM is essential for glucose homeostasis. REM is associated with higher utilization as compared to NREM.

During normal sleep, leptin levels rise, signaling satiety and reducing appetite, while ghrelin levels decrease, which suppresses hunger.

With disrupted sleep, leptin levels drop and ghrelin levels rise, resulting in increased hunger, contribution to weight gain, and metabolic disturbances.

Brain Health - The glymphatic system and human memory

During REM-sleep, cerebral blood flow is highest. Sleep is essential for clearing toxins from the brain, including beta-amyloid, a substance linked to Alzheimer's disease.

Sleep supports memory consolidation and synaptic pruning. Poor sleep disrupts mood and increases stress by affecting the brain's hormone balance.

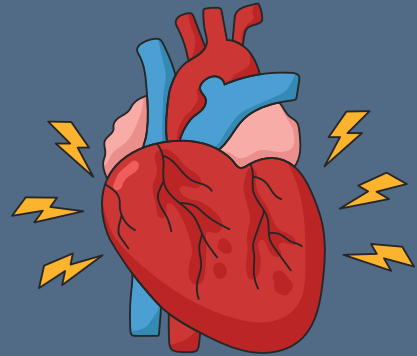

Sleep deprivation increases anxiety, emotional reactivity, and mood disorders. REM sleep is especially important for managing stress and maintaining psychological health.

Cardiovascular Health - Nocturnal dipping and autonomic nervous system balance

Particularly during deep (slow wave) NREM sleep, blood vessels dilate, HR and BP dip by ~10%. The increased parasympathetic tone and decrease in sympathetic tone during sleep is a hallmark of cardiovascular recovery. This shift also reduces inflammation and oxidative stress in the vasculature.

Adults who sleep 5 hours or less have a 200-300% higher risk of coronary artery buildup.

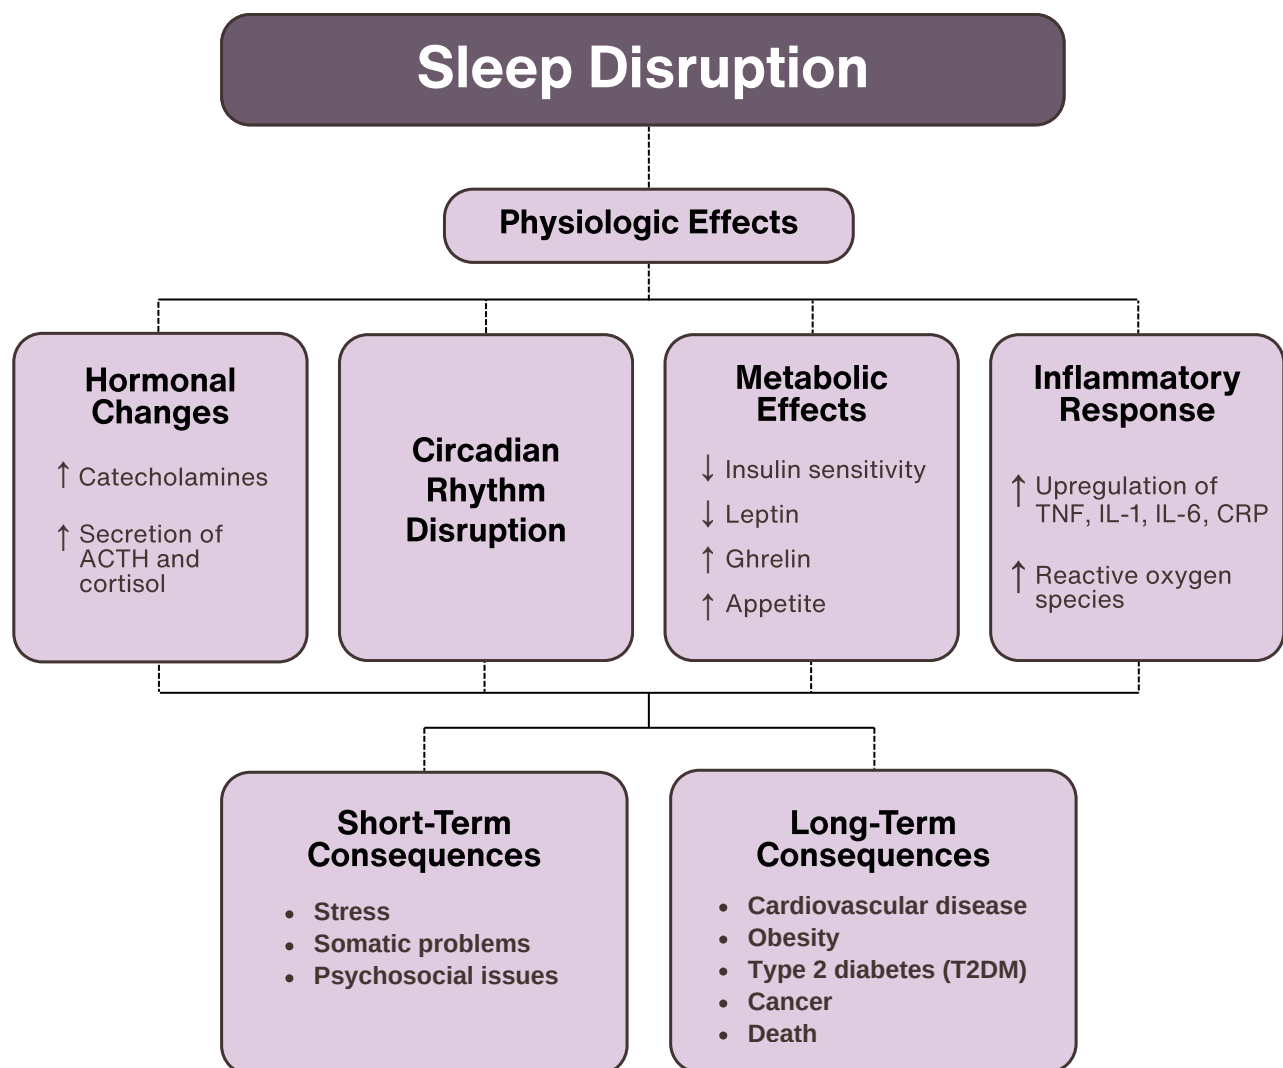

Hormonal Health - Sex and growth hormones

During normal sleep, testosterone secretion peaks, particularly during morning hours. Highest levels are observed during first REM cycle.

During normal sleep, the largest burst of growth hormone occurs soon after falling asleep, closely linked to the first episode of deep slow-wave sleep, and can account for up to 70% of daily GH output. This surge is essential for growth, tissue repair, and metabolic health, and is diminished if sleep is delayed or disrupted.

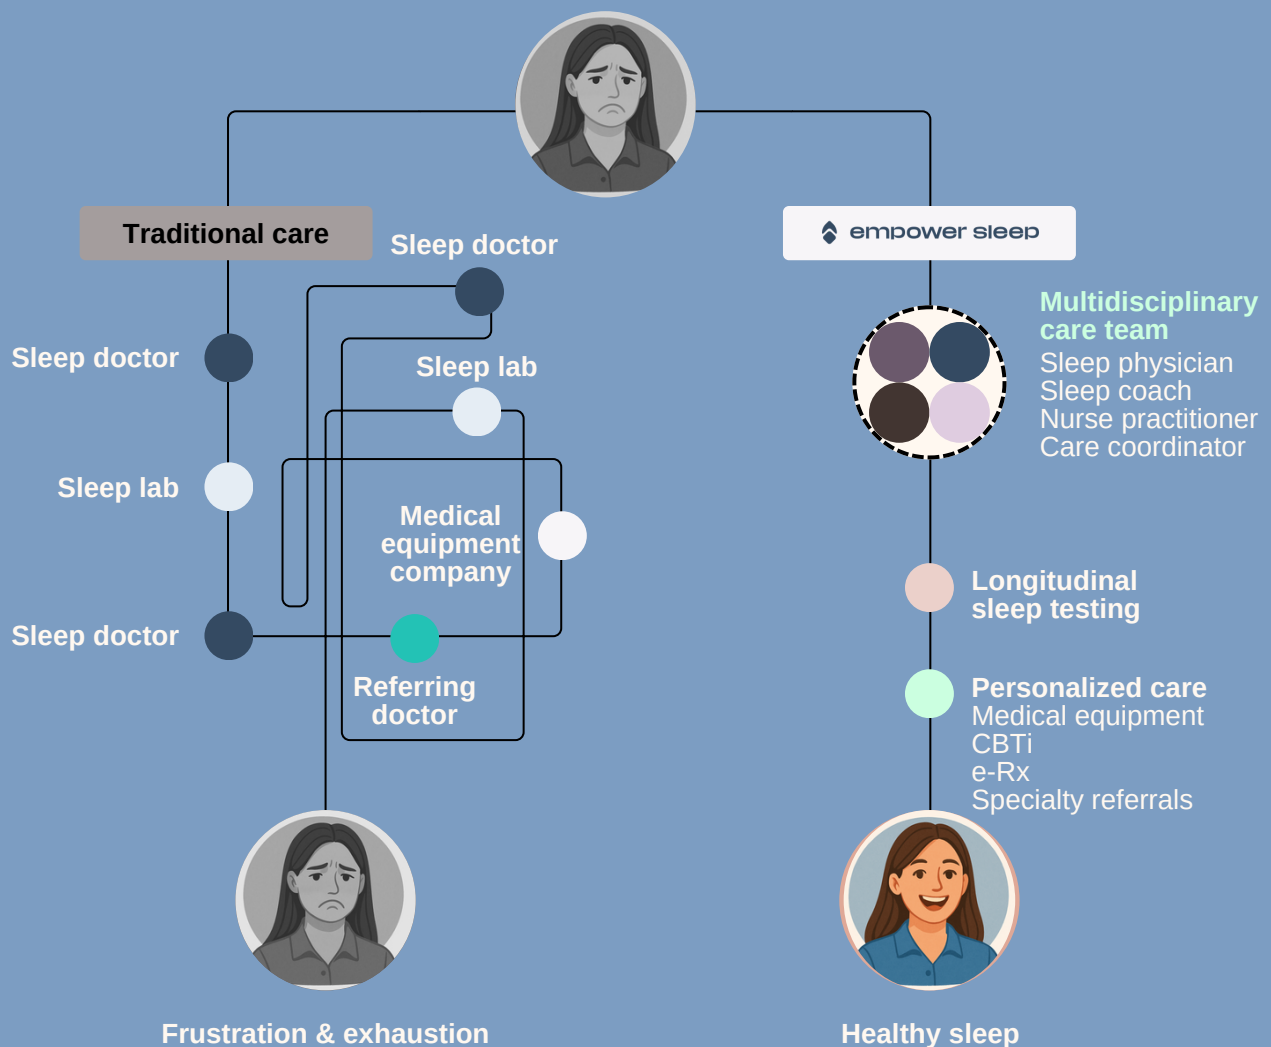

Pathologic Sleep = Disease

The Empower Sleep Approach

Empower Sleep is a **data-driven virtual sleep clinic that diagnoses, treats, and manages sleep disorders** with medical-grade diagnostics. Our board-certified sleep physicians use longitudinal sleep testing, AI-powered data analysis, and comprehensive treatments to deliver personalized care—all from the comfort of the patient's home.

Impact of Empower Sleep on Obstructive Sleep Apnea Outcomes

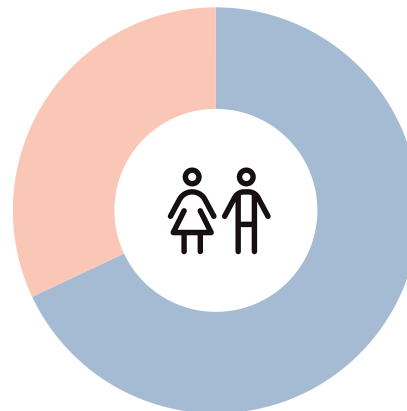

Demographics

Empower Sleep supports patients of all genders, ages, and locations. Our patients come from diverse socioeconomic and ethnic backgrounds, and we provide translation services to ensure care is accessible to non-English-speaking individuals.

The data shown is from a 50-patient pilot program of patients with severe OSA.

Gender Distribution

32%
Female

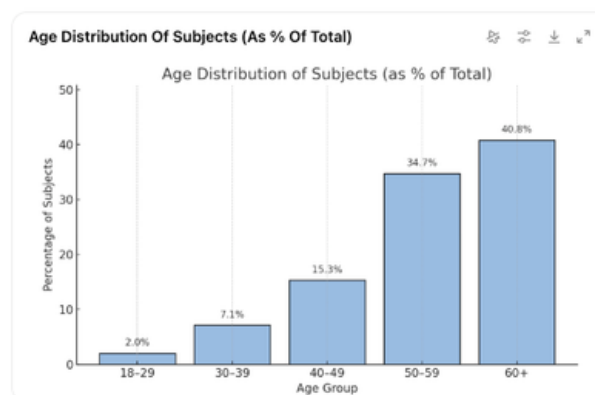

68%
Male

Age Distribution

The average age of our pilot patient population is 57 years, while most patients are above the age of 50.

Empower Sleep's Impact on Access to Care

Improving access to professional sleep care leads to better health, increased energy, and a higher quality of life. At Empower Sleep, we prioritize identifying the root causes of sleep issues. Our expert team provides personalized and effective support, quickly.

92%

of Empower Sleep patients can be seen by a sleep coach in **3 days**

83%

of patients had an initial consultation within **10 days**

86%

received a home sleep study within **3 days** of sign up

vs. traditional care, where the average wait time is **48 days**—a delay that often leads to worsening sleep conditions and broader health complications.

Empower Sleep Impact on Patient Engagement

Meaningful interaction with patients is essential to high-quality care, especially when it comes to sleep. Longer, focused consultations allow our experts to deeply review the patient's sleep history, uncover underlying causes, and develop a personalized sleep plan that works.

Empower Sleep's virtual-first care model enables our sleep specialists to spend significantly more time with each patient compared to traditional models, where the average visit in traditional models is only 22 minutes.

Patients interact with Empower Sleep through various communication channels, highlighting our personalized and accessible approach to care:

1.4 million

minutes (372 minutes per patient) over ~3 months

Our clinicians take the time to understand sleep issues, identify triggers, tailor treatment plans, and collaborate with outside providers when needed.

5,700

visits and phone calls completed

Sleep specialists and care coordinators respond to concerns, adjust treatment plans, and provide ongoing support.

63,000

messages exchanged

In-app chat keeps patients connected between sessions—ensuring quick answers, accountability, and peace of mind.

Empower Sleep Impact on Patient Satisfaction

Many patients come to Empower Sleep after years of fragmented, ineffective care that didn't resolve their sleep issues. Traditional sleep medicine often falls short due to limited time, one-size-fits-all treatments, and lack of follow-up.

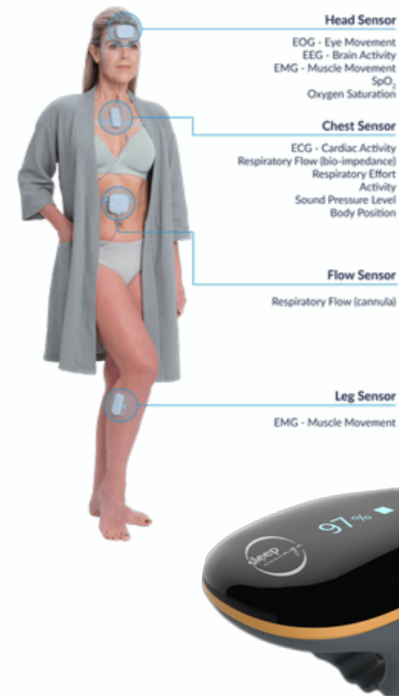

Empower Sleep takes a different approach: continuous sleep testing, detailed evaluations, personalized care plans, and continuous support, making a real difference in our patients' lives.

At Empower Sleep, 93% of patients report satisfaction with their care, thanks to our high-touch, patient-centered approach. Our Net Promoter Score® **(NPS) of +82** shows that the vast majority would recommend Empower Sleep to others.

Patient satisfaction with traditional care

Patient satisfaction with Empower Sleep

“

“The care I’ve received from Empower Sleep is unlike anything I’ve experienced in the 9 years I’ve struggled with sleep issues. For the first time, I feel truly heard and supported by a team that looks beyond quick fixes. They helped me understand the root cause of my sleep problems and created a personalized plan that actually works. I finally feel in control of my sleep and my life again.”

Empower Sleep's Impact on Clinical Outcomes

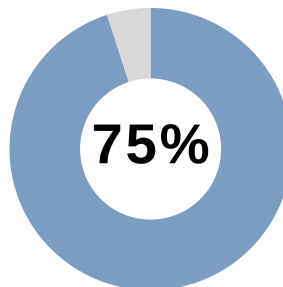

Symptom Severity

Before starting care with Empower Sleep, 92% had untreated moderate to severe sleep apnea (AHI3%).

Symptom Improvement

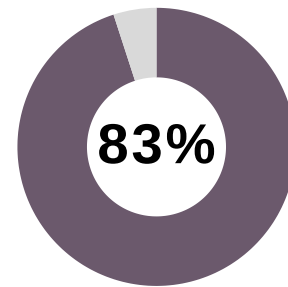

All patients who used CPAP through Empower Sleep had an improvement in their sleep apnea.

Reduction in Sleep Apnea burden

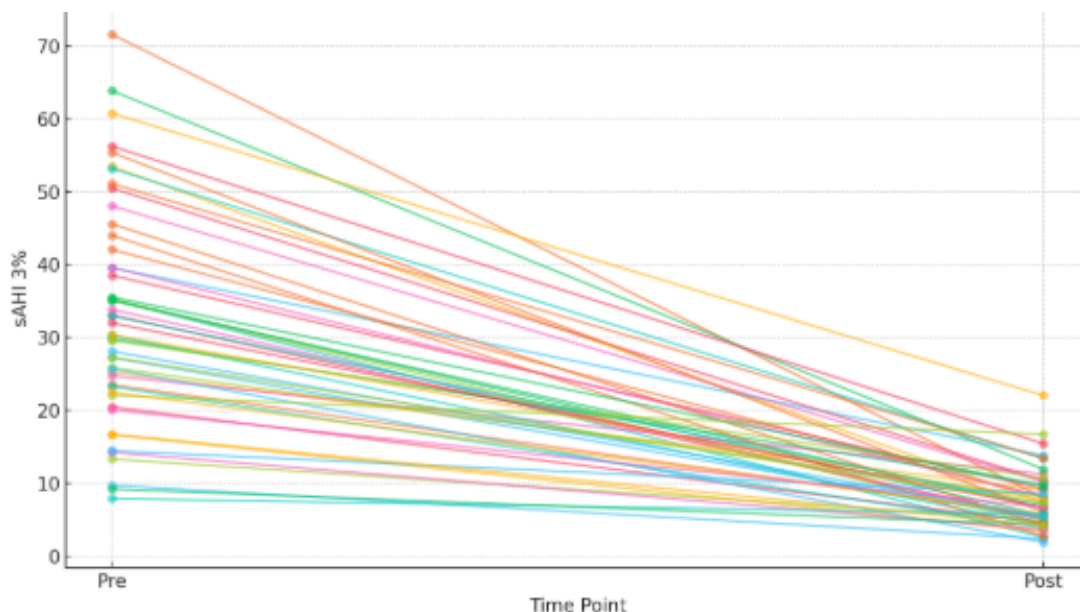

Symptom Control

Within 3 months, 83% of Empower Sleep patients gained control over their sleep and felt confident managing it—compared to just 42% CPAP compliance in traditional sleep care systems.

CPAP Compliance

Patient Reviews

“

"I was referred by my concierge doctor. Empower Sleep's level of care exceeded even my highest expectations. It's like having a sleep team on call."

— Sarah V., 47, Concierge Medicine Patient

“

"I would snore for years and feel exhausted. Turns out I had severe sleep apnea. Within weeks of starting Empower Sleep, I had more energy, better focus, and finally stopped relying on coffee to survive the day. They dialed in my CPAP using tons of data. This is the future of healthcare."

— Jason L., 42, Tech Executive

“

"Between work and kids, I thought exhaustion was just normal. Empower Sleep uncovered my insomnia and helped me get back on track with a plan tailored to my life. I finally feel like myself again."

— Cynthia K., 36, Mom of Two
